DETAILED ACTION

Drawings

1. The drawings are objected to as failing to comply with 37 CFR 1.84(p)(5) because they do not include the following reference sign(s) mentioned in the description: element 18, ink inlet openings, page 8, line 1 of the disclosure. A proposed drawing correction or corrected drawings are required in reply to the Office action to avoid abandonment of the application. The objection to the drawings will not be held in abeyance.

Claim Rejections - 35 USC § 102

2. The following is a quotation of the appropriate paragraphs of 35 U.S.C. 102 that form the basis for the rejections under this section made in this Office action:

A person shall be entitled to a patent unless –

(b) the invention was patented or described in a printed publication in this or a foreign country or in public use or on sale in this country, more than one year prior to the date of application for patent in the United States.

3. Claim 13 is rejected under 35 U.S.C. 102(b) as being anticipated by Kneezel et al. (U.S. 5,850,234).

Kneezel et al. disclose a component for an ink distribution assembly for an ink jet printhead in the form of at least one printhead chip (80) having sets of ink inlet openings (86, 88, 90, column 7, line 66-column 8, lines 3), each set having at least one inlet opening for receiving an ink of a particular color to be supplied to the printhead chip, the component comprising:

a carrier (122) having an elongate structure with a printhead side that is engageable with the printhead (80) and an opposed ink supply side, and defining feed openings (130, 132, 134) through the carrier to be in fluid communication with respective ink inlet openings of the printhead, the ink supply side of the carrier defining a number of discrete feed formations (130, 132, 134), each feed formation being configured to receive ink of a particular color and to be in fluid communication with the, or each, inlet opening of a respective set, via the feed openings, and the printhead side of the carrier defining at least one ink supply formation, the carrier defining at least one passage in fluid communication between the, or each, ink supply formation and at least one of the feed formations (fig. 10).

Allowable Subject Matter

4. Claims 1-12 and 14 are allowed.

The prior art of record does not disclose a carrier with discrete feed formations configured to receive ink of a particular color, in combination with a printhead chip, and a cover that is engageable with the carrier, so that when the cover is in position, the cover serves to define a roof for the feed formations so that the cover and the ink supply side of the carrier define ink pathways that are in fluid communication with respective feed formations.

Conclusion

5. Any inquiry concerning this communication or earlier communications from the examiner should be directed to Julian D. Huffman whose telephone number is (703) 308-6556. The examiner can normally be reached on Monday through Friday from 9:30 a.m. to 6:00 p.m.
